

Intelligent, Efficient, and Scalable Security for Hospitals, Healthcare Facilities

Intelligent, Efficient, and Scalable Security for Hospitals, Healthcare Facilities

Hospitals and healthcare facilities are facing staffing shortages, shrinking budgets, and rising costs. This, paired with 24/7 visitor traffic, HIPAA data privacy requirements, and a high-stress environment for staff and patients alike, makes comprehensive security coverage challenging.

The **HiveWatch® GSOC Operating System** allows these types of facilities to increase operational efficiencies, reduce cost, and enhance their existing security technologies to better serve their visitors and staff.

Product Highlights

- **Improve operational efficiencies and quality of care** Address staff shortages and enhance operational efficiency with remote patient monitoring. Be alerted of high-risk movement or falls.
- **Orchestrate guard dispatch** via the mobile app with more context (including video) when compared to traditional radios for more efficient, intelligent, and timely response – keeping staff and patients even safer.
- **Control access to unauthorized areas** and keep tailgating at bay. Make sure only the right people are able to access controlled areas and be alerted when the wrong ones sneak in.
- **Meet HIPAA security requirements** with technology that alerts when unauthorized people are in restricted areas.
- **Address security staffing requirements** with technology that reduces false alarms and noise.
