Intelligent, Efficient, and Scalable Security for Financial Institutions

With countless branches, data centers, and offices spread across the state, country, or the world – financial institutions are riddled with disparate systems. Even if a bank branch is outfitted with modern technologies, the security program remains vulnerable and ineffective if these technologies don't work together.

The **HiveWatch® GSOC OS** allows financial institutions to connect disparate systems while creating a global view of a holistic security program complete with data.

Product Highlights

- **Unify disparate systems:** Bring cameras and access control from your branches, data centers, and corporate offices together on a unified platform without the need to rip and replace

- **Global view:** Map-based interface shows a full picture of global facilities

- **Emergency Services Communications:** Dispatch local emergency services directly from the GSOC

- **Ability to scale and grow quickly:** Whether you grow through M&A or organically, rapidly integrate new or acquired security systems

- **Virtual security operations repository:** Manage your ever-changing footprint via site snapshots that include addresses, EMS, utilities, escalation teams, and more

- **Guard Mobile App:** Proactively dispatch a guard to the scene giving them contextual video reference so they know what they're responding to
