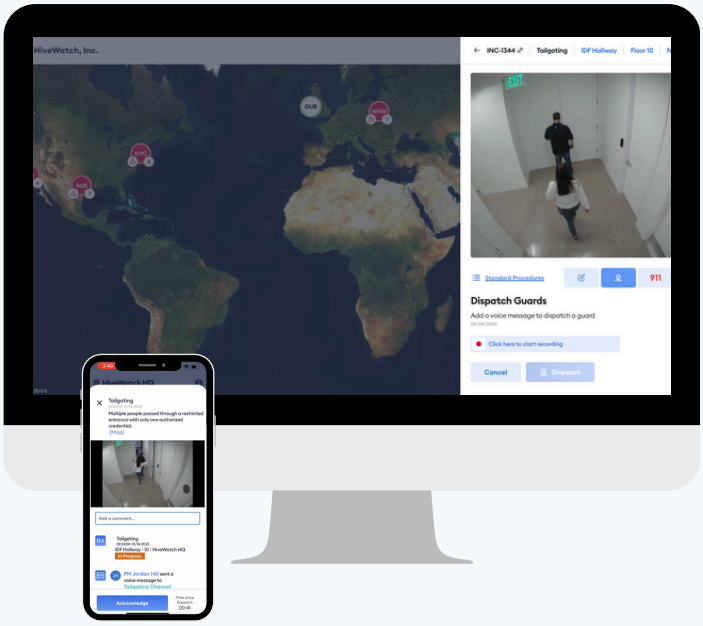
HiveWatch + ONTIC

Together, HiveWatch and Ontic are breaking down security silos to create a unified security ecosystem from incident, through investigation.



Physical security teams can now use the **HiveWatch® GSOC Operating System** to ingest incidents from disparate systems and push them to **Ontic's case management** platform for further analysis and investigation. With this seamless integration, teams can quickly share data amongst each other, ultimately enabling faster, more informed, and more proactive responses to threats.

Key Benefits:

- Automatically document and escalate incidents in Ontic from the HiveWatch platform, creating a streamlined workflow from immediate response to deeper investigation in the Ontic platform
- Seamlessly leverage GSOC ingested incidents to enhance case investigations, ensuring a seamless handoff between security and investigations teams
- Change security from reactive to proactive
- Integrate threat management
